

XEN Network 首次与中文社区的对话

AMA - XEN Network & Avalanche & CryptoCell Labs & 3AM

2022/10/24, 11AM (EST)

YoRHa@CryptoCell.Guru

<https://cryptocell.guru/>

<https://twitter.com/CryptoCellLabs>

一、 主办方、主持人介绍：

I . Intro of the host parties and the hosts

举办方：

XEN Network、Avalanche 雪崩、CryptoCell Labs、3AM Club 麻音俱乐部、星球日报

Host parties:

XEN Network, Avalanche, CryptoCell Labs, 3AM Club, and ODAILY NEWS

主持人：

Charles: 3am、181 联创

Quincy: CryptoCell Labs BD 总监

Hosts:

Charles: Co-founder of 3AM Club and 181 community

Quincy: Business Director of CryptoCell Labs

嘉宾：

Jack Levin: XEN 创始人、Google 第 21 号员工

唐玮：加密货币投资人、XEN 白皮书中文译者、

JIAJIA: Avalanche Foundation 中国区市场负责人

Calman: 3am 联创、WEB3 先锋

Guests:

Jack Levin: founder of XEN CRYPTO and Ex-googler #21

Tang: Crypto investor and the translator of XEN's litepaper

JIAJIA: Head of China marketing of Avalanche

Calman: a web3 pioneer and the co-founder of 3AM Club

特别鸣谢：

CryptoCell Labs 是一个专注于区块链研究、知识共享和数据分析的平台。他们的目标是让业内人士更容易识别市场模式并抓住机会。

CryptoCell Labs 也积极参与 XEN Crypto 生态建设，推出了 Mint Monitor 和 Claim Monitor 两个工具，前者可以为用户提供 XEN 的 Mint 成本盈利及相关信息监控，后者为 Mint 后的钱包地址申领动态提供一站式监控管理服务。

Special thanks to:

CryptoCell Labs is a platform focusing on blockchain research, knowledge sharing, and data analysis. We aim to make it easier for business insiders to identify market patterns and seize opportunities.

CryptoCell Labs has also actively participated in the construction of XEN Crypto ecosystem, and has launched two tools, Mint Monitor and Claim Monitor. Mint Monitor provides users with XEN's Mint cost, profit and related information monitoring. Claim Monitor provides one-stop monitoring and management services for wallet address' claims after Mint.

二、Jack Levin：对现今加密货币的看法、XEN 目前概况

II. Jack Levin's thoughts on the current cryptocurrency industry and brief introduction of XEN

我从 2011 年开始就进入加密货币领域。当时挖比特币的时候没人知道它是什么，价格也就大概是 1 美元一个。显然在 12、13 年后，我们看到的是全新的、不同的东西。以太坊催生出了这个神奇的沙盒，它让我们能够创建许多有趣的 defi 协议和许多其他有趣的东西，有很多创意艺术也参与其中，我们也随之看到很多从未见过的作品，这养的环境对艺术家来说是非常有影响力的。这些都是以太坊的优势，任何人都可以创造想要的东西，连编程都是现成可用的。

I've been in the cryptocurrencies since the very beginning from 2011. I was mining Bitcoin when it was about a dollar per Bitcoin, and nobody knew what it was. It was a very interesting experiment. Obviously, 12 or 13 years later, we're looking at something entirely new and something different. So, Ethereum gave the rise to this amazing sandbox that allowed us to create a lot of interesting defi protocols and many other interesting things. There's a lot of creativity artistry being involved. We're looking at the work that we haven't really seen before, and it became really

impactful type of environment for the artists. Those are the benefits of Ethereum. Obviously, anybody can create pretty much anything they want. The programming is available.

不幸的是，随之而来的劣势也正浮出水面。很多人关注 CRM 和开发新代币只是为了赚快钱，而做不到我所说的加密货币第一原则。因此，XEN 协议的设计旨在回到比特币的根源，并真正做到自我监管、开源、透明、共识真相、和对抗交易对手风险。我们喜欢区块链的一切都会被 XEN 所放大。

Unfortunately, it also created a lot of situations where people are just looking at the CRM and the development of new coins just to make money fast as quickly as they can. And they're not really looking at what I call first principles of crypto. So, XEN protocol has been designed to go back to the roots of Bitcoin and really leverage the self-custody, open source, transparency, truth by consensus, counter party resistance. And everything we love about blockchain is being amplified with XEN.

XEN 属于是最友好的加密货币了。虽然它诞生了才 15 天，但在这 15 天内，我们在 7 条不同的链上进行了大约 2000 万笔交易。

XEN is the friendliest cryptocurrency. It's only been alive for 15 days. But in 15 days, we have had about 20 million transactions on 7 different chains.

XEN 不同于很多其他的加密货币，但是它与比特币并没有太大区别。最大的不同是比特币的生产方式是受限的，您必须是矿工才能生产比特币，而且还必须为大量设备付费。但是 XEN 呢，您只需要拥有以太坊钱包就可以随着时间的推移进行挖矿。意思是，您将钱包连接到智能合约，再指定想要铸币的时间。在这段时间结束时，您就可收集铸造完成的 XEN 了。

XEN is different compared to the recent cryptocurrency that had been released. However, it is not much different from Bitcoin. The biggest difference is that Bitcoin has been limited in the way that it is produced. You have to be a miner to produce Bitcoin, and you have to pay for a lot of equipment. With XEN, you just need to have your Ethereum wallet, and you are mining with time. And when I say that mining with time, what this really means is that you connect your wallet to the smart contract, you specify the amount of time your mint needs to run, and then you collect your mintable or minted XEN coins at the end of the period.

这与挖矿非常相似，只是它更像是一种虚拟挖矿。您可以根据需要，用任意数量的钱包铸造，并在没有任何供应限制的情况下，铸造尽可能多的币。供应实际上仅受增强值的限制，这也是在我们创建的公式里。

Now, this is very similar to mining, except it's more of a virtual mining. You can launch as many wallets as you want, and mint as many coins without any limitation of the supply. The supply is really only limited by the adoption amplifiers, which is part of the adoption formulas that we have created.

刚开始的时候，您每天可以铸造 3 万到 6 万个币。然而在大约 8 年内，当铸造难度达到历史最高水平时，您将只能铸造 10-20 个 XEN 加密货币。因此，铸造难度与时间流逝有关。从 XEN 的发布到结束，正好有 3000 天，所以大约是 8 年零 3 个月。而相较于比特币，XEN 中期的结束时间要更短。在前 4 年，一半的 XEN 将会被铸造完毕。

At the beginning, you could be making between 30,000-60,000 per day. However, in about 8 years, when the difficulty is all-time high, and there is difficulty in XEN, you will be minting between 10-20 XEN crypto coins. So, the difficulty is linked to the time passing. There is exactly 3,000 days from the inception or launch of XEN until the end, so it's about 8 years and 3 months. For the mid phase to be over, Bitcoins length is much longer. XEN is a little bit shorter. In about 4 years, it's going to be 1/2 of the XEN that you can create for yourself.

另一件有趣的事情，也是这个博弈机制和博弈论的一部分，是我们根据来到 XEN 网络的参与者数量来增强奖励。所以，如果您只有自己铸币，赚的钱要比和朋友一起铸币少得多。如果您加入了协议并邀请了您的朋友，或者只是经历了协议的增长，那么 XEN 的回报实际上也会增加。不像有很多其他币的稀缺性模型（有限供应量），XEN 的供应量或铸造能力会随着参与者总数的增加而增加。

The other interesting thing, and it's part of the game mechanics and game theory, is that XEN amplifies the rewards based on the number of participants that come to XEN's network. So, if you're minting by yourself, you're making a lot less than if you were to mint with your friends. If you joined the protocol and invite your friends, or just have experienced the protocol growth, the XEN amplification will actually increase. Unlike the scarcity model with many coins, where there is a limited supply, XEN's supply or minting capacity increases with the total number of participants.

我们试图通过 XEN 加密货币解决的目标是——为普通人提供最低的进入门槛。没有太

多人意识到，世界上 95%-96% 的人口其实从未接触过加密货币。我们的目标是将 XEN 带给其余 95% 的人口，并以安全的方式将这些人带入区块链和加密货币的世界。这是 XEN 的首要目标。

The goals we are trying to solve with this cryptocurrency is that we want to have the lowest barrier to entry for regular people out there. Not many people realize that 95%-96% of the world's population have never touched the cryptocurrency. It is our goal to bring XEN to the 95% of the rest of the population, and bring those people into blockchain world and into crypto in a safe manner. This is the NO.1 objective of XEN.

三、JIAJIA: XEN 在雪崩链上的数据表现

III. JIAJIA shares the data performance of XEN on Avalanche

根据目前的数据来看，XEN 在 10 月 13 日的时候正式上线 Avalanche。11 天左右的时间一共累计了 40 万左右的用户地址，其中活跃地址超过 20 万，也就是说，将近 170 亿枚 XEN 在未来会出现在 C 链上。

According to the current data, XEN was officially launched on Avalanche on October 13. In about 11 days, a total of about 400,000 user addresses have been accumulated, of which more than 200,000 are active addresses, that is to say, nearly 17 billion XEN will appear on the C-chain in the future.

像 XEN 这样充满活力的项目很显然为我们带来了数据层面的提升。根据 C 链的统计，上线前两天，C 链与之相关的活跃地址增长超过 2 倍。不得不说 XEN 的出现对于目前稍显疲惫的市场来说是一针强心剂，如果 XEN 是一场盛大的社会实验，那么它其实比很多以 DAO 为概念的项目更像一个 DAO。

A dynamic project like XEN has obviously brought us a lot of data-level improvements. According to C-Chain statistics, the number of active addresses associated with C-Chain increased by more than 2 times two days before launch. It has to be said that the emergence of XEN is a boost for the current slightly tired market. If XEN is a grand social experiment, then it is actually more like a DAO than many other DAO projects.

无论是从去年 1000 万枚 AVAX 的 Rush 计划对于 Defi 类项目的支持，还是今年针对子

网的专属基金激励，雪崩给我的感觉就是，只要您愿意干，我们就会不遗余力的支持。About Avalanche, whether it's the support of Defi projects from last year's 10 million AVAX Rush plan, or this year's exclusive fund incentives for subnets, the feeling that Avalanche gives me is that as long as you are willing to do it, they will do their best to support you.

这一点在子网的数据上其实也能看出来，有数据之前提到 C 链的很多数据都下降不少，但这其实忽略了子网的数据增长，雪崩有很多优质的项目正在着手或者已经在子网上构建自己的专属链了。

This can actually be seen in the subnet data. Earlier, some data mentioned that many data of the C-chain have dropped a lot, but this actually ignores the data growth of the subnet. Avalanche has many high-quality projects that are working on or have already built their own exclusive chains on the subnet.

说到这里，我想再说一下对于 XEN 的看法。XEN 是一个很有魅力的项目，在机制的设计和价值的平衡上很有意思，是非常值得关注的一个项目。

Having said that, I would say that XEN is a fascinating project. It's very interesting in the design of the mechanism and the balance of value, and this is a project worthy of attention.

在未来，也期待 XEN 给我们更多的惊喜，雪崩一直都非常鼓励创新项目的出现。同时 XEN 也给我们带来一个值得思考的地方，那就是：代币的价值到底来源于何方？感谢大家。

In the future, we also expect XEN to give us more surprises. Avalanche has always been very encouraging for the emergence of innovative projects. At the same time, XEN also brings us a place worth thinking about that is: where does the value of the token come from?

四、Jack Levin：代币的价值从何而来？

IV. Jack Levin: Where does the value of the token come from?

当我第一次接触比特币时，我也不认为它会有任何价值。这是很明显的，因为没人用它。根据定义，它就是没有价值。

When I first got into Bitcoin, I didn't think it would have any value either. It was kind of obvious because it basically means that something that is not used by anyone. It is by definition useless. it has no value.

成功产品的原则之一，是市场契合度和市场采用率。XEN 旨在将加密货币纳入整个世界，自然得就像我们每天的必用物品一样。想象一下，如果有 5 亿人持有 XEN，那么它的价值就在社区当中。

One of the tenets of successful products is the market fit and market adoption. XEN is designed to adopt the whole world into cryptocurrencies. Just like anything else out there that people use. Imagine if 500 million people hold XEN, then the value is in the community.

当我说价值在于社区时，您可以把它变成一个非常简单的思维实验。例如，一个服务商正试图为其产品接受加密货币，他们会选择拥有 100 万用户还是 2 亿用户的地方？很明显会是那 2 亿用户。如果这些用户都持有 XEN，那他们就是所有服务和供应商的目标受众，这就是价值所在——价值在于被社区乃至全球采用。

And when I say the value is in the community, you can make this a very simple thought experiment. A service provider who is trying to accept cryptocurrency for their products, would they go for somewhere where they have 1 million users or 200 million users? It is obvious that 200 million users are out there. If they are holding XEN, they are the target audience for all of the service and suppliers, and that is where the value is - the value is in the community and in the global adoption.

我们可以通过协议中适当的游戏机制来实现它。同时，XEN 是最用户友好的加密货币，您不需要花钱去得到它。所以可能有很多人会说，“它是免费的代币，所以它没有价值。”虽然铸 XEN 是免费的，但参与进区块链可不是免费的。首先，您需要支付 gas 费，这就会限制相当部分想要参与的人数。其次，“时间”是另一个铸造 XEN 的刚需，而时间也是有价值的。

And, of course, we can achieve it by the appropriate game mechanics within the protocol as well as XEN crypto being the most user friendly crypto out there that you do not need to pay money for. So, a lot of people say, “it is free token, so it should be worthless or worth nothing” . However, it is free to mint, but it is not free to participate in the blockchain. First, you need to pay gas. Therefore, gas will limit the total number of emissions. Secondly, the time that you need to spend to mint is

always a requirement. And time is worth value as well.

XEN 上线的第一天就冲进来了 25 万人。这里面一半的人铸造了 XEN，并开始在第二天进行二级市场交易。我们之前希望交易价值是零的，但是它的价值显然远高于此。大家起初不知道 XEN 是什么，出于好奇就会在二级市场进行交易。因此，XEN 的价值就立刻体现出来了。

On the on the first day of the launch, 250,000 people came. And on the next day, half of those people minted XEN and started trading it. We expected the value to be zero. However, the value was way above zero, and people wanted to trade it because they were curious, they didn't know what it was. So, the value was present right away.

价值也存在于 XEN 的想法本身。XEN 解决了目前任何其他加密货币都无法解决的市场问题。市场上的确有很多 meme 币和 defi 币，但他们都只是在“向内看”。他们着眼于目前使用加密货币的 4%-5% 的人口，大家都当作是一个大游戏在玩。大家的确都很兴奋，也都是很聪明的人。

然而，世界上还有很多人从没接触过加密货币，这个问题始终没有得到解决。我们希望用 XEN 来解决这个问题以获得最大价值的体现。让我们给未来一点时间吧。总之，我们非常兴奋，希望这是一个能给世界带来巨大改变的项目。

But the value is also present in the actual idea itself. The idea addresses the market that not any other cryptocurrency is currently addressing. There is a lot of meme cryptocurrencies and defi cryptocurrencies, but they're all looking inward. They're looking at the current 4%-5% of the population that they are using cryptocurrencies and are playing with it like a giant game. People are excited and they're very smart. However, the rest of the world is out there, and the problem of onboarding the world's population has not been solved. And we're hoping that the value will come from solving that problem. The future will tell. We are very excited and hoping that this is one of those projects that's going to make a huge difference for the world.

五、唐玮：分享对 XEN 的看法和 XEN 的投资价值

V. Tang shares his views on XEN and the investment value of it

作为一个币圈投资者，我每天都会看到很多新项目，但是 XEN 非常特别，与其说是我

找到了 XEN，不如说是 XEN 找到了我，它创世那天就以超高的热度吸引了所有人的目光。当时心想热度高也可能昙花一现，就没有关注。

As an investor in the industry, I have come across hundreds of new projects so far. And so when I found XEN crypto, I could immediately tell that it was a very special project. It captured everyone's attention since day 1. But not mine because I thought that was just a short hype, people were minting it, out of FOMO.

但连续几天 gas 飙升让我再也不能忽视它，兴奋地打开官网查看白皮书，连续看了几遍，终于有了一些认识。它利用 gas 做价值绑定，以低门槛的铸造方式公平分配 Token，利用市场博弈动态平衡币价。

However, the gas fee surged for several days made me unable to ignore it anymore. So, I immediately go to your website and start reading the litepaper. After watching it several times in a row, I finally grasp some understanding out of it. XEN uses gas fee for value binding, and distributes tokens fairly by free minting to lower the entry barrier. It uses the market games to dynamically balance the price of XEN.

gas 涨跌会影响 XEN 的铸造，XEN 的币价也会影响 gas 费的涨跌。参与者不仅要跟市场博弈，还要跟自己博弈，XEN 真是一件精美的艺术品。

The fluctuation of gas fee will affect the minting of XEN, and vice versa. Participants not only have to compete with the market, but also with themselves. XEN is indeed a beautiful work of art.

XEN 是公平的：它没有预挖，要得到更多 Token，只能增加 Mint 天数，只有时间是对大家都公平的，您不需要竞争算力就可以用低门槛铸造。

XEN is born fair. It doesn't have pre-minting. To get more tokens, you can only extend your term, meaning the days you're willing to wait. Only time is fair to everyone. People can mint with a low barrier without competing the computing power.

未来它的分布将更分散，这一点超越了比特币。正如白皮书写的，它是流通货币、大众货币。

In the future, the distribution of XEN will be more decentralized than Bitcoin. As written in the litepaper, it's the cryptocurrency in circulation and the cryptocurrency for the people.

XEN 是个人主权的启蒙运动：如果您能用很少的 gas 费获得丰厚的代币回报，但前提是学会用钱包，并且在很长时间内管理它，那么您会行动吗？XEN 就是这样一个 token，以最低的门槛让您尝试管理自己的钱，直到爱上这个过程。

XEN is the enlightenment movement of individual sovereignty. If you can get great token returns with little gas fee, but only if you learn to use a wallet and manage it over a long period of time, will you do it? Will you take action? XEN is such a token that allows you to try to manage your own money with the lowest barrier until you fall in love with the process.

对于一个没有发行上限的 token 来说，它的价值来自于哪里？首先它是用当下的 gas 铸造的，有铸造成本；

So, for a token with no issuance cap, where does its value come from?

First of all, it is minted with the current gas fee, and there is an actual minting cost;

第二：它与 gas 费用之间的关系是动态平衡的，币价高会增加铸造行为推升 gas，gas 上升又会抑制铸造行为，所以它是区块链世界的 gas 调节器。

Second, the relationship between XEN and the gas fee is dynamically balanced.

High token prices will increase the minting behavior and push up the gas fee, and the increase in gas fee will inhibit the minting behavior, so XEN is the gas fee regulator in the blockchain world.

第三：因为极低的门槛，它有最广泛的分布，每个人都可以拥有它，试想一下，每个人都拥有它的时候，它不就是事实上的流通货币吗？

Third, because of the extremely low barrier, it has the widest distribution. Everyone can mint it and own it. Just imagine, when everyone owns it, isn't it the actual currency in circulation?

第四：它前期通胀后期通缩，随时间推移获币数量和难度会逐步增加，前期进入的人有红利期。

Fourth, it has inflation in the early stage and deflation in the later stage. The amount and difficulty of minting XEN will gradually increase over time, and those who enter in the early stage will have a bonus period.

最后，感谢 Jack 的团队为加密社区带来这么好的产品，希望 XEN 越来越好，我的发言

就到这里，感谢大家！

Finally, I would like to thank Jack's team for bringing such a good product to the crypto community. I hope XEN will get better and better.

六、Calman：对比 XEN 和 BTC，介绍为何 XEN 是对中本聪的比特币白皮书之重构

VI. Calman talks about XEN and Bitcoin, and share why he thinks XEN is a reconstruction of Satoshi's Bitcoin white paper

中本聪理念是构建一种去中心化，无需信任的货币，而目前 BTC 70%的流通量集中在 2.5%的人群手中，经过多年的演变，已经逐步变成一种资产，而非货币。

The idea of Satoshi is to build a decentralized and trustless cryptocurrency. As for now, 70% of the circulation of Bitcoin is concentrated in the hands of 2.5% of the population. After years of evolution, it has gradually become an asset, not a currency.

货币的本质是交易的媒介，以以太坊为例，每笔交易都是以太坊上经济活动的最小单元，而以太坊的经济活跃程度通过 GAS 的高低而体现。因此，GAS 费就是直接反馈以太坊经济活动的指标。

The essence of currency is the medium of transaction. Taking Ethereum as an example, each transaction is the smallest unit of economic activity on Ethereum, and the economic activity of Ethereum is reflected by the level of GAS FEE. Therefore, the gas fee is an indicator that directly feeds back the economic activity of Ethereum.

XEN 的产生和 GAS 费直接关联，其实恰好符合第一性原则，抓住了经济活动的根本，而不是去想办法与美元挂钩，那怕某个算法稳定币做到了美元 1 比 1，它也一样是被美联储所控制，被美国经济控制，也不是无需信任和绝对安全的。而只有与体现经济活动情况的 GAS 费关联，才是有可能搭建出真正的区块链世界的稳定货币。XEN 走出一条有可能成为普适性区块链货币的路。

The minting of XEN is directly related to GAS FEE. In fact, it just conforms to the first principle and captures the fundamentals of economic activities, rather than trying to find a way to pegg it to the US dollar. Even if a stablecoin achieves a 1 to 1 ratio with the US dollar, it's still controlled by the Federal Reserve and the US economy, and it's

NOT trustless and absolutely safe. And it's only possible to build a stable cryptocurrency in the real blockchain world if it is related to the GAS fee that reflects the economic activity.

XEN walks a path that has the potential to become a universal blockchain cryptocurrency.

当然现在还是非常早期，谁都无法预测 XEN 的设计思路是对是错。但仅从目前的分析，XEN 拥有最简单的获取形式，自主的铸造量选择，也拥有匹配于经济活动情况的货币供应关系。

如果说算法稳定币是加密货币世界的圣杯，那么 XEN 是目前最接近圣杯的一个项目。And of course, we're still in very early stages, no one can predict whether XEN's design is right or wrong. But only from the current analysis, XEN has the simplest form of acquisition, independent choice of minting amount, and a money supply relationship that matches the economic activity.

If stablecoins are the holy grail of the cryptocurrency world, XEN is currently the closest project to the holy grail.

七、问答环节：

VII. Q&A

（1）目前市面上有许多小工具，关于 XEN 铸造后的管理，Jack 认为目前有哪款特别好用的工具吗？

（1）There are many web3 tools on the market already. Regarding the self-custody aspect of XEN, does Jack think there is a particularly useful tool to assist users?

XEN 是一种教育币，也是社交币。

XEN is an educational crypto. It's also a social crypto.

XEN 的主要目标之一是教人们自我监管。很多人不知道 MetaMask 或加密钱包是什么。有些人甚至认为他们所有的加密货币实际都存在于他们的钱包中。而 XEN 是一种非常安全和简单的加密货币，尝试一下没有太大的风险。您还可以顺道了解什么是私钥，什么是公钥，如何将加密货币从您自己发送给您的朋友，等等。

One of the primary goals of this cryptocurrency is to teach people about self-

custody. A lot of people do not know what MetaMask is or a crypto wallet is. And some people think all of their crypto actually exists inside their wallet. XEN allows very easy and safe exposure to cryptocurrencies without much risk. You also get to understand what is the private key, what is the public key, how to send cryptocurrency from yourself to your friends, so on and so forth.

自我监管是每个人都应该学习的首要原则。很多人不知道区块链的含义，也不知道区块链是如何工作的。

Self-custody is the first principle that everybody should learn. A lot of people do not know what it means, the implications of the blockchain, or how the blockchain works.

XEN 是一种非常简单的工具，可以让人们安全地探索加密货币的世界。它就像一辆自行车。从来没开过车的人都应该先试试自行车，XEN 就是那种自行车。

XEN is one of those very easy vehicles that will allow people to explore the world of cryptocurrency safely. It's like a bicycle. Anybody who never driven a car should really try a bicycle first, and XEN is that bicycle.

(2) 这么庞大的用户群体，XEN 会怎么去发展以继续服务这些用户？

(2) With such a large user group, how will XEN develop to continue serving these users?

XEN 技术团队现在的主要目标之一是给出尽可能最好的分析，以便大家能够理解协议是如何工作的。

One of the primary objectives for the XEN technical team is to come up with the best analytics possible, so that people can understand how the protocol works.

铸造的简易性无疑是我们另一个会优先考虑的问题。目前，XEN 允许您从多个钱包进行铸币，但还没有方法可以简单地通过一次交易，即可从多个钱包中进行铸币。我们正在开发一种允许“多铸币”能力的工具。比如说，如果您愿意支付更多的 gas 费用，您将能够根据合同来启动虚拟钱包，这将使您能够快速铸造更多的 XEN。所以您可以，比方说，不是每枚铸币交易 1 美元，而是 100 美元，那您的铸币能力将增加 100 倍。

The ease of minting is definitely another priority. Currently, XEN allows you to mint

from multiple wallets. There is no easy way to mint from multiple wallets with one transaction. We are developing a tool that will allow the multi-mint capability, where should you decide to pay more gas, you will be able to spin up virtual wallets under a contract that will allow you to mint more XEN quickly. So, you will be able to, let's say, trade not \$1 per mint, but let's say \$100, and your mint capability will increase 100 times.

这将为那些，既了解如何编写程序，又能使用许多钱包铸大量 XEN 的技术人员，创造一个公平的竞争环境。我们将开发一个 web 界面，允许单笔交易多铸币，这将从本质上使它公平。

This will level the playing field for the technical people who understand how to write programs and to mint a lot of XEN with many wallets.

We will develop a web interface that will allow the single transaction multi-mint that will essentially make it fair.

XEN 从公平的角度出发，毕竟我们是公平加密基金会，一切都应该是公平的，技术也应该允许人们在平等的环境中参与到这个生态系统来。因此，我们将继续从两个维度为用户服务：一个是数据分析，更好地追踪您在做什么；其次就是更容易铸币的能力。XEN comes from the perspective of fairness. We are the Fair Crypto Foundation, and everything should be fair, and the technology should allow people to participate in this ecosystem from the equal playing field. So, we will continue serving our users from two objectives. One is the data analytics, better ability to track exactly what you're doing. Secondly is the ability to mint even easier.

(3) 为什么要在各个链上部署 XEN，是否有计划部署在 ETH 的 L2 网络层？

(3) Why is XEN be deployed on various chain, and are there any plans to deploy it at Layer 2 of ETH?

这个问题我们也考虑了很长时间。我们应该在单一链上还是多个链上发布？

We have thought about this question for a long time. should we launch on a single chain or in many chains?

我们希望 XEN 实现全球的大规模采用。我们也同时意识到有很多人喜欢不同的链，例

如，币安有很多玩 NFT 的用户，有很多游戏都是通过游戏来赚钱的。它价格低廉，让用户无需太多投资就能进入加密货币领域。因此，我们认为推出 XEN 的最佳方式是链不可知论或采用多链策略。

We want to achieve the world's mass adoption. And we realized that there are a lot of people who prefer different chains. For example, Binance has a lot of users that play with NFTs. There's a lot of play-to-earn games. It's inexpensive and allows people to get into crypto without much investment. And so, we thought that the best way to launch XEN is to be chain agnostic or have the multi-chain strategy.

实践证明，这个策略对我们来说非常有效。首先，它为各大链创造了非常多好的营销，很多收到 XEN 的链都获得了流量峰值。如果您去看我的推特，就会看到我做了一个关于独立地址的增长分析。甚至在币安上也有很多钱包地址。XEN 已经产生了可衡量的影响，甚至在 Moonbeam 和 Ethereum 的工作量证明链也产生了更大的影响。您可以清楚地看到，用户创建了大量的新钱包地址来铸造 XEN。

It definitely worked for us. First of all, it created a lot of good marketing for the chains a lot of chains that received XEN have received a spike in traffic. If you look at my twitter, I did an analysis on the unique address growth. Even on Binance, it has a lot of addresses. We have created a measurable impact. Even more impact was created for moonbeam and Ethereum Proof-of-Work chain. You can clearly see that people are making new addresses in playing and minting XEN at a very large number.

为了让 XEN 的采用率最大化，我们决定必须部署上多链，这样我们就可以让大家自由选择他们喜欢的链。最终，一个从币安开始的人，或者从 Polygon 开始的人，如果他们愿意花更多的 gas 费，他们可以自由切换到以太坊去继续铸币，也去体验和参与不同的经济环境。

We decided that, in order for adoption to be the absolute best, we should just be on every chain, so that we can give people an option to choose the chain that they like. Ultimately, a person who starts on Binance, or who starts in Polygon, can switch to Ethereum if they want to spend more gas money potentially participate in the different economic setup because Ethereum is obviously more expensive, it has more projects.

另一方面，L2 旨在为复杂的 Defi 项目交易产生的节省 gas 费，但 XEN 的交易并不复杂。所以，我们认为 L1 可能是目前最好的策略，因为它可以把人都留在 L1 上。我认为从长远来看，这也会为大家创造更多价值。

On the other hand, layer two has been designed to save on gas for complicated defi transactions. XEN's transactions are not complicated. So, we're thinking probably the Layer 1 chain is the best approach for now because it keeps the people on the Layer 1 chain. I think it will actually create more value for the people in the long term.

我们也欢迎大家提出和设计自己的 Defi 协议，并使用 XEN 进行质押，或者做他们想做的任何其他事情。届时，那些 Defi 协议肯定可以放在 L2，因为它们可能很复杂。XEN 可以在第一层和第二层之间轻松切换。

However, everybody is welcome to come up and design their own defi protocols and to use XEN for staking or anything else that they want to do. Now, those defi protocols can definitely live on Layer 2 because they could be complicated. And XEN can be easily portable between layer one and layer two.

(4) 现在 XEN 有 NFT 吗？或者未来会有 XEN 的 NFT 吗？

(4) Is there any current NFT of XEN, or will there ever be any XEN NFT in the future?

目前还没有针对 XEN 的 NFT。我知道有一些开发小组正在 XEN 之上构建 NFT，以便让 NFT 与 XEN 可以一起使用。我们可能会考虑在 NFT 领域做一些工作，但我们将始终专注于第一原则。我们来这里不仅仅是为了娱乐，我们的使命要比这个大得多。当然，您可以从 XEN 中获得乐趣，但我们的使命是把 XEN 带给更多的大众。如果 NFT 帮助我们做到这一点，那么当然，我们会考虑类似 NFT 项目的，因为现今的 NFT 市场已经相当发达了，不需要过多教育，很多人也已经知道 NFT，所以 NFT 可能也会对我们的用户产生很好的影响，也有未可知。

Currently there is no NFTs for XEN. However, I am aware of some development groups that they are building NFTs on top of XEN to use NFTs with XEN.

We may consider to do some work in the NFT space, but obviously we will always be focused on the first principles. We're not here just to provide entertainment. Our mission is much broader. Of course, you can have fun with XEN, but the broad mission of XEN is to bring masses to XEN. And if NFT helps us to do that, then, of

course, we will consider some sort of a project that involves NFTs because NFT marketplace is quite developed at this point. A lot of people know what it is. Potentially, it could make a very good impact for our users.
